Overview

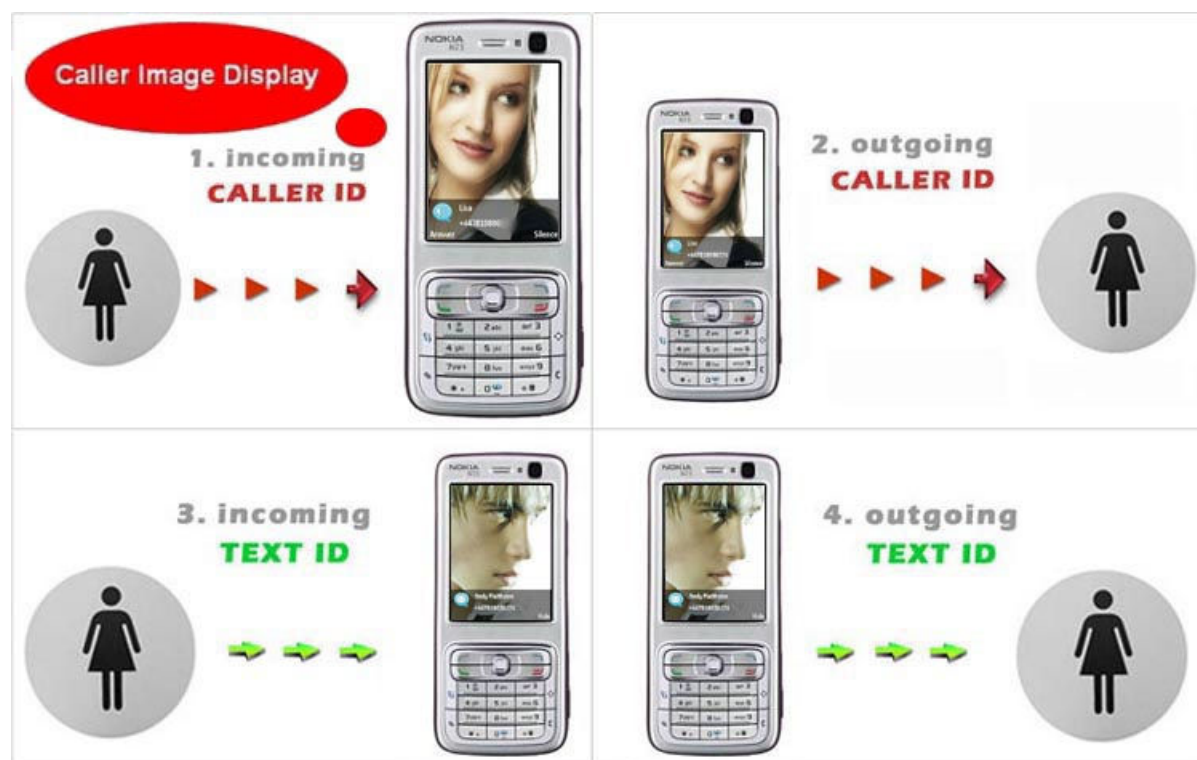

SkyeCaller is an advanced, easy to use Symbian S60 mobile device application that allows the user to identify both voice callers and the sender of text messages through an associated full screen image display.

SkyeCaller allows the user to pair an image on their mobile device with a contact in the phonebook. On receiving a voice call or text message, the caller image and contact details are displayed on-device in full screen.

The same method applies to all outgoing calls and text messages allowing the user to determine who a call or text message is being sent to via the SkyeCaller image display. This is a useful confirmation technique to help avoid communication to unintended recipients.

SkyeCaller adds value to the daily mobile use experience by contributing a highly compelling, easy-to-use, interactive and dynamic visual element to all voice and text communications.

Screenshot Functionality

Activating & Enabling

Activating:

After installing SkyeCaller, to launch the application click the SkyeCaller Icon found on your device Main menu or Tools menu.

Once activated for the first time, SkyeCaller will automatically launch in the background on switching your handset on.

This eliminates the need to activate the application each time your device is booted.

SkyeCaller needs to run in the background in order for the caller/text ID functionality to operate.

Enabling/Disabling Events:

SkyeCaller is Enabled by default i.e. incoming and outgoing calls and text message events are set to Enabled so that all these events will result in a Full Screen Image being displayed.

Each of these events can be individually disabled/enabled by tabbing across to the Settings Tab and selecting the event and setting the option as either Enabled or Disabled.

Optional device 'instances' include Incoming/Outgoing Call, Text and Multimedia (MMS).

Contact Display Options

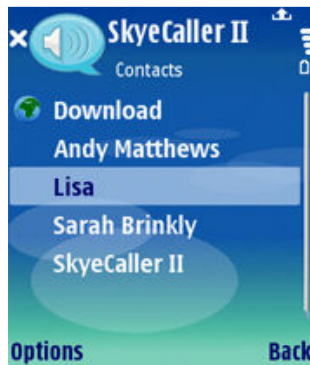

Contact Display:

In the Setting Tab, the order of your contact display can be set to either:

- Last Name then First Name e.g. Brinkly, Sarah
- First Name then Last Name e.g. Sarah Brinkly

Pairing a Contact to an Image

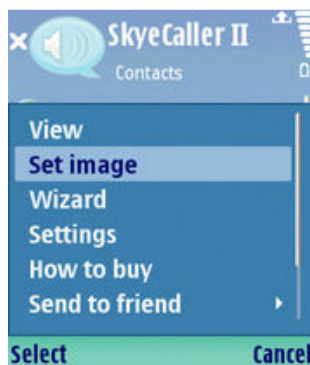

Select a Contact:

In order to pair a Contact with an Image on your device, each Contact entry needs to be associated with an image file.

Using the SkyeCaller Contacts tab window, use the device joystick to scroll to the contact you wish to pair with an Image. The selected Contact will appear highlighted.

Select:
Options

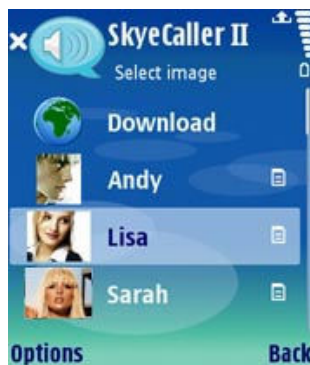

Set Image:

With a Contact having been selected, an Image needs to be associated to that Contact entry.

Images may be loaded to your device through any traditional means e.g. PC, device-device, using the device camera etc. Any Image on the device can be used to pair with a Contact.

Select:
Set Image – Select

Select Image:

A list of thumbnails and file name representing all the images on your device will be presented for selection. By default, SkyeCaller will present images on both the device drive and Memory Card (if applicable).

Scroll through this listing and select an Image.

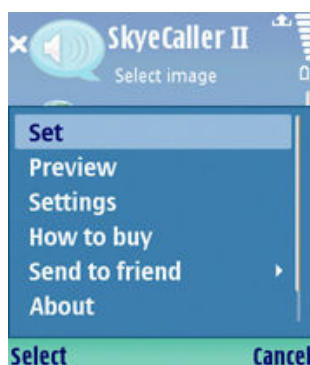

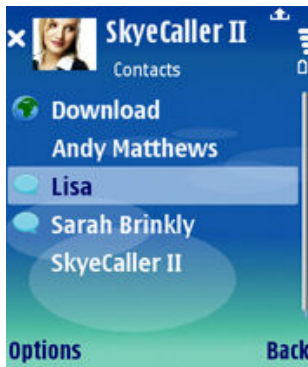

Image link with Contact:

To set the selected image to the contact entry:

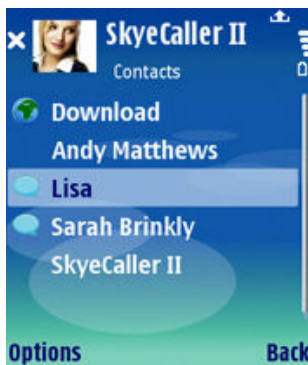

Select:
Options – Set

The image file may also be previewed by selecting:
Options – Preview

Verify Image Association:

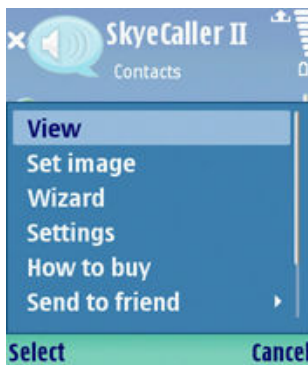

Once an Image has been associated with a Contact successfully, a small blue SkyeCaller icon will appear alongside the Contact entry.

Contact Thumbnail:

A small thumbnail of the associated contact image will also appear in the top left-hand corner of the SkyeCaller Contacts Tab display view for those contact that have an associated image.

Other Application Functionality

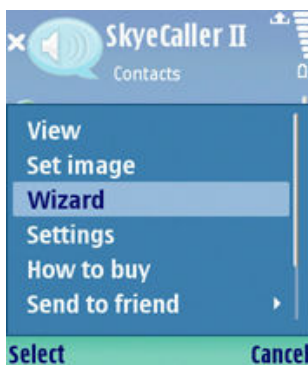

View Contact:

To view a Contacts information e.g. mobile number, email address etc, scroll over the Contact in the Contacts tab view.

Select:
Options – View – Select

The Contact details will be displayed directly from the SkyeCaller application.

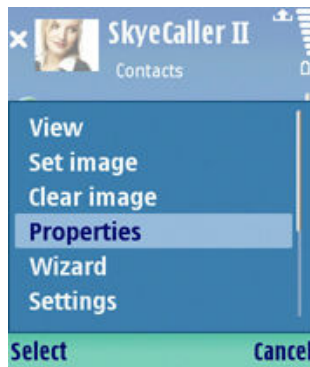

Wizard:

The 'Wizard' feature is a one-click function that takes much of the effort out of pairing an image to a Contact. The 'Wizard' intuitively associates each Contact to an image file on-device with a similar name e.g. Contact name 'Sarah Brinkly' might be paired to images named 'Sarah.jpg', 'SarahBrinkly.jpg', 'Sarah Brinkly.jpg' or 'Brinkly.jpg' by the Wizard.

Select:
Options – Wizard – Select

Any auto-associations done via the 'Wizard' can be overwritten/edited manually using the regular Contact – Image pairing process.

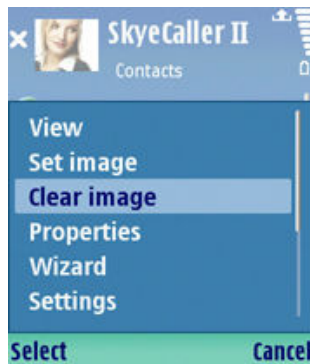

Image/Contact Properties:

To retrieve information relating to an Image already associated with a Contact, scroll over the Contact in the Contacts tab view.

Select:

Options – Properties – Select

The related Image details will be displayed.

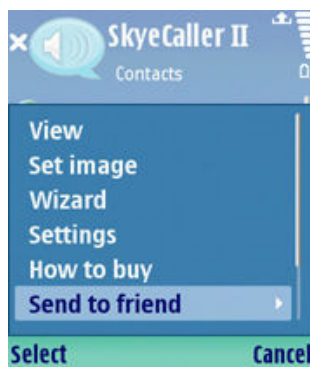

Clear Image:

To Clear and Image you have associated with a Contact, scroll over the Contact in the Contacts tab view.

Select:

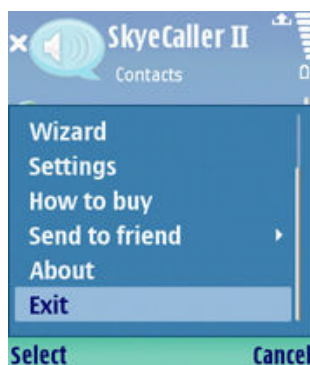

Options – Clear Image – Select

The related Image will be Cleared and the small SkyeCaller Icon alongside the Contact will disappear.

Send to Friend:

Share SkyeCaller Full Screen Caller Display by sending a Free Trial to a friend by text message, multimedia message or Bluetooth.

Exit Application:

By default, SkyeCaller will go to Background mode when it is not active. It will NOT Exit automatically.

To Exit the SkyeCaller application, in any Tab of the SkyeCaller application:

Select:

Options – Exit – Select

This action will Exit the application. If the device is rebooted, SkyeCaller will automatically start-up in background mode again.
